# netis Unmanaged Switch **Quick Installation Guide**

The Switch mentioned in this Quick Installation Guide stands for netis 100Mbps & 1000Mbps unmanaged switches, including models-ST-3105, ST-3108, ST3108S, ST

For simplicity, we take ST3105S as an example of the product images below.

### **Hardware Installation**

- 1. Connect one of the Ethernet ports on the switch to your router's LAN port with an Ethernet cable.
- Connect your computer to one of the other ports on the switch with an Ethernet cable.
- 3. Plug the provided Power Adapter/Power Cord into the power jack of netis switch and the other end to a standard electrical socket.

### LED Indicators

The LED Indicators will allow you to monitor, diagnose and troubleshoot any potential problem on the switch, connection and attached devices.

(Not all the LED indicators in the following table are included on one switch. Please refer to the panel of your switch.)

| LED   | Status   | Indication   |
|---|----------|--|
| PWR   | On       | The switch is powered on.  |
|   | Off      | The switch is powered off.   |
| LINK/ACT<br>(1-5/8; LAN1-LAN5/<br>LAN8; 1X-16X/24X) | On       | The corresponding port is conne cted to a network device.  |
|   | Flashing | Data is transmitting through the corresponding port.   |
|   | Off      | No device is connected to the corresponding port.  |
| 100M (/1000M)                                       | Flashing | There is a 100Mbps (/1000Mbps) device connected to the corresponding port.   |
|   | Off      | There is a 10Mbps (/10/100Mbps) device connected to the corresponding port, or there is no device connected to the corresponding port. |
| PoE   | On       | There's a PoE PD (Power Device) connected to the corresponding port, which supply the power successfully.                              |
|   | Off      | No PoE PD is connected to the corresponding port or no power is supplied according to the power limits of the port.                    |
| PoE MAX<br>(*for PE6108GH/<br>PE6108G)              | On       | The power of all the connected PoE ports is >=60W (/120W). No power may be supplied if additional PDs are connected.                   |
|   | Off      | The power of all the connected PoE<br>ports is < 60W(/120W) or there is<br>no PoE PD connected to the corres<br>ponding port.          |

# netis Unmanaged Switch Quick Installation Guide

## **Troubleshooting**

1 The Power(PWR) LED is not on

> Check if the Power Adapter/Power Cord is well connected. Try to unplug and plug back in the Power Adapter/Power Cord to the switch or try another power outlet.

2. The LINK/ACT LED is not on.

> Make sure the network configuration of connecting device is correct, and network card and drivers are installed correctly.

> Check the cable connections.

> Make sure the cable distance between the switch and other IEEE802.3 compatible network device does not exceed 100 meters.

3. Performance is bad.

> Check the status of Ethernet switching. If Ethernet switching is set to full-duplex on one device but a partner is set to half-duplex, then performance will be poor.

> Make sure the cable between the switch and other IEEE802.3 compatible

network device is Category 5 UTP or better.

4. Some devices can't talk to other devices on the network.

> Check status of the LINK/ACT LEDs to make sure devices are linked.

> Make sure that the devices' network configurations are correct.

> Reset the switch if needed.

## Appendix A: FCC Statement

(For ST-3105, ST-3108, ST3105S, ST3108S, ST3105G)

communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment of fand on, the user is encouraged to try to correct the interference by one or more of the following measures:

-Recordent or relocate the receiving antenna.
-Increase the separation between the equipment and receiver.
-Connect the equipment into an outlet on a circuit different from that to which the receiver is

Consult the dealer or an experienced radio/TV technician for help. (For ST3108G, ST3116, ST3124, ST3116P, ST3124P, ST3116G, ST3124G, PE6108, (For S1 1066, 513116, 513124, 513116F, 513124F, 5131166, 5131246, FE6108F, FE6108F, PE6108GH, FE6108G)

This Equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC rules.

pursuant to Part 1 or the PCC fulse. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications.

Operation of this equipment in a residential area is likely to cause harmful interference, in which case the user will be required to correct the interference at his/her own expense.

(A shielded-type power cord is required in order to meet FCC emission limits and also to prevent interference to the nearby radio and television reception. It is essential that only the supplied power cord be used.]

[Use only shielded cables to connect I/O devices to this equipment.]

You are cautioned that changes or modifications not expressly approved by the party responsible for compliance could void your authority to operate the equipment [ ]:depend on EUT condition.

Operation is subject to the following two conditions:

(1) this device may not cause harmful interference, and

(2) this device must accept any interference received, including interference that may cause undesired operation.

### Appendix B: Industry of Canada Statement

This Class [B] digital apparatus complies with Canadian ICES-003.

Cet appareil numérique de la classe [B] est conforme à la norme NMB-003 du Canada.

This Class [A] digital apparatus complies with Canadian ICES-003. Cet appareil numérique de la classe [A] est conforme à la norme NMB-003 du
